Preface

This report presents the latest estimates on national accounts statistics. The report was compiled by Statistics Botswana. It is based on the reported returns of establishments within various sectors of the economy of Botswana. The report is in four sections; definitions of concepts, analysis of results; statistical tables and methodology. The description of the method used is included as a section at the end of the report.

Some of the pronounced quarterly movements in the estimates are because of large seasonal variations, which arise from factors or events that occur regularly mostly within fairly fixed period. The series in this publication are not adjusted for seasonal factors.

This publication contains other national accounts aggregates which were last published in 2001. These are compensation of employees by economic activity, Gross Domestic Product by type of income, Gross National Income, Gross National Disposable Income, Gross Savings, Gross Capital Formation by type of assets and Capital Stock by type of assets.

Gross Domestic Product estimates are based on administrative records and the results from sample surveys conducted by Statistics Botswana and other institutions. First estimates are normally based on limited data and hence could not be precise and absolute. The figures are revised after receiving finalized or audited data from companies in which some differences and inconsistencies in the previously published data may be observed.

Statistics Botswana acknowledges and appreciates contribution of all stakeholders in the production of this report.

For more information and further enquiries, contact the Directorate of Stakeholder Relations at 3671300. All Statistics Botswana outputs/publications are available on the website at www.cso.gov.bw and at Statistics Botswana's Library (Head-Office, Gaborone).

1. Introduction

This publication contains Gross Domestic Product (GDP) by economic activity and components of final demand at current and constant prices for the years of 1994 to 2014. The estimates from 2013-2014 are provisional and subject to change.

The accounts presented in this report adhere to the General Data Dissemination System (GDDS) of the International Monetary Fund (IMF), which sets out standards on coverage, periodicity and timeliness of data. They cover the period January to December.

Botswana's national accounts statistics are compiled in accordance with international standards contained in the System of National Accounts (SNA), in particular SNA 1993. The System of National Accounts is the internationally agreed standard set of recommendations on how to compile measures of economic activity in accordance with strict accounting conventions based on economic principles. The recommendations are expressed in terms of a set of concepts, definitions, classifications and accounting rules that comprise the internationally agreed standard for measuring such items as Gross Domestic Product (GDP), the most frequently quoted indicator of economic performance. The accounting framework of the SNA allows economic data to be compiled and presented in a format that is designed for purposes of economic analysis, decision-taking and policymaking.

2. Annual Gross Domestic Product

2.1 Revisions in this release

Revisions have been made to the Gross Domestic Product (GDP) estimates published in December 2015. The changes were due to the updated source data and have affected the following industries; Mining, Water & Electricity, Finance & Business Services and General Government.

In 2013, Diamond mining contributed 78.2 percent to total mining sector compared to 75 percent in 2012. In 2014, diamond mining contributed 81.7 percent to total mining sector.

Table A1: Key figures at constant 2006 prices (Annual Percentage Changes)

	2011	2012	2013	2014
Total final consumption	7.2	2.9	11.5	0.5
Gross fixed capital formation	12.2	13.6	-6.8	15.3
Exports	27.5	17.8	29.8	12.1
Imports	19.2	32.1	11.6	6.9
Gross domestic product	6	4.5	9.9	3.2
GDP per Capita	4.1	2.5	7.8	1.3

The estimated GDP at current prices increased to P142, 466.1 million in 2014 compared to a revised level of P124, 310.7 million in 2013, recording an increase of 14.6 percent.

The estimated GDP at constant 2006 prices increased to P85, 619.4 million in 2014 compared to a revised level of P82, 960.5 million in 2013.

Real GDP increased by 3.2 percent in 2014 compared to a revised growth rate of 9.9 percent in 2013. The increase in real GDP was mainly due to Transport & Communications, Trade, Hotels & Restaurants which recorded an increase in value added of 7.4 and 7.1 percent respectively. All other industries recorded a positive growth in 2014 with the exception of Water & Electricity and Agriculture which recorded a decrease of 55.8 percent and 0.4 percent respectively. The slow growth rate of 0.5 percent in the Mining sector is attributed to 6.6 percent increase in diamond

production compared to a high increase of 12.2 percent in the previous year. The significant growth of 9.9 percent in 2013 real GDP was due to the inclusion of new mines in the accounts namely Lucara diamond mine, Boseto copper mine and Missana copper mine. The real value added of the mining sector increased by 24.2 percent in 2013 (Table 4).

There was a significant decrease in the value added by the Water and Electricity sector of 55.8 percent realized in the year 2014. The decline is largely by the Electricity sector which has been contributing negatively to the economy since the first quarter of 2012 due to substantial increase in intermediate consumption. Imported Electricity which is included in the intermediate consumption went up by 11.8 percent in the year under review. Water sector value added decreased by 11.6 percent in 2014. The shortage of Water in the country is the major contributor to the decline in the real value added.

Contribution to GDP by industry is shown in table 2. Mining remains a major contributor to GDP, its contribution went up to 24.0 percent in 2014 compared to 21.0 percent recorded in 2013. In the third quarter of 2014, there was a strong performance at Jwaneng mine, where higher grade carats were produced. Mining contribution was also improved by the inclusion of new mines in the accounts.

Table A2: Annual percentage change in Real GDP by Economic Activity

	2011	2012	2013	2014
Agriculture	0.2	-8.5	1.3	-0.4
Mining	-6.5	-5.8	24.2	0.5
Manufacturing	11.4	3.7	6.5	0.4
Water & Electricity	-34.2	-27.5	67.5	-55.8
Construction	23.1	14.4	5.1	2.8
Trade, Hotels & Restaurants	13.8	6.8	7.7	7.1
Transport and Communication	6.1	10.9	5.4	7.4
Business Service	7.7	9.1	8.8	2.4
General Government	6.3	2.8	6	4.6
Social and personal Services	8.3	10.7	8	4.2
Total Value Added	6.1	4.5	10.1	3
Taxes Less Subsidies	5.8	4.3	7.7	4.9
Total GDP	6	4.5	9.9	3.2

Figure 1: Annual percentage change in real GDP

2.2 Gross Domestic Expenditure

Real gross domestic expenditure increased by 7.9 percent in 2014 compared to an increase of 3.2 percent in 2013. In addition, real consumption demand increased slightly by 0.5 percent, real consumption expenditure by households, Non profit Institutions Serving Households (NPISH) and government showed growths of 4.1, 9.9 and 2.2 percent respectively (Table A2).

In the case of foreign trade, real exports increased by 12.1 percent in 2014, compared to an increase of 29.8 percent in 2013, while real imports in 2014 rose by 6.9 percent as opposed to an increase of 11.6 percent in 2013.

Table A3: Annual percentage change in Real Domestic Expenditure

	2012	2013	2014
Total final consumption expenditure	2.9	11.5	0.5
Household final consumption expenditure	-1.3	10.3	4.1
Final consumption of NPISH	4.6	12.4	9.9
Government final consumption expenditure	15.2	14.2	2.2
Gross Capital formation expenditure	13.6	-6.8	15.3
Gross Domestic expenditure	5.3	3.2	7.9

Figure 2: Components of Gross Domestic Expenditure at constant 2006 prices

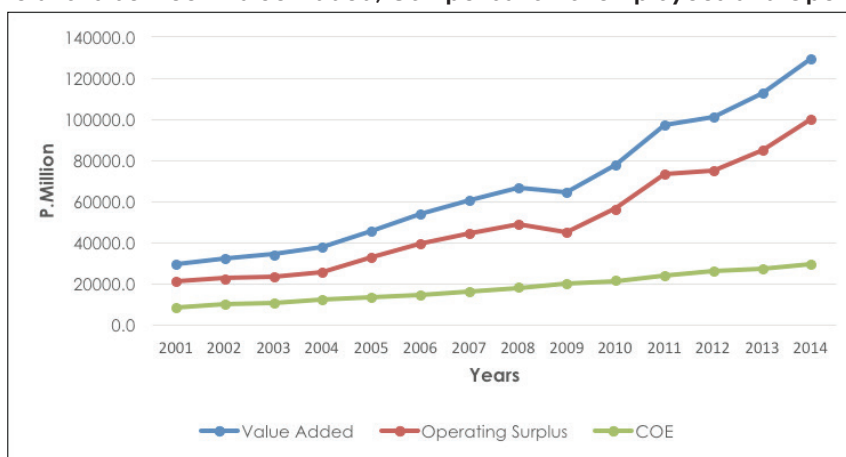

2.3 Compensation of Employees by Economic Activity

Compensation of employees is the total remuneration payable by an enterprise to the employees for work done during the accounting period. There are three main components of compensation of employees; being wages & salaries in cash, wages & salaries in kind, and employer's social contributions (consists of social contributions payable by the employer for the benefit of their employees).

Compensation of employees increased by 8.0 percent from P27, 324.2 million in 2013 to P29, 500.6 million in 2014.
2.4 GDP by Income approach

GDP by income approach is the sum of primary incomes distributed by resident producer units. This is calculated as the sum of compensation of employees by economic activity plus taxes on production plus consumption of fixed capital and operating surplus which is calculated as a residual. Operating surplus increased by 17.3 percent in 2014.

Figure 5: Relations between Value Added, Compensation of employees and Operating Surplus

2.5 Gross National Income (GNI)

Gross domestic product is an aggregate measure of production; it refers to production of all resident units within the borders of a country, which is not exactly the same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad. The contribution of labour is accounted for through the compensation of employees paid to non-residents and received by the economy. In addition, some primary income generated within the country may go to non-residents.

GNI is derived as Gross Domestic Product plus net primary incomes from abroad (net compensation of employees from abroad plus net property income from abroad).

Net compensation of employees is income earned by Botswana residents abroad minus income earned by non-residents in Botswana. Net property income is Botswana Investment abroad minus foreign investment in Botswana.

Gross National Income increased by 13.2 percent in 2014 while Gross Domestic Product at current prices increased by 14.6 percent the same year. In 2014 GNI was estimated at P139, 772.1 million while GDP was P142, 466.1 million.

2.6 Gross National Disposable Income (GNDI)

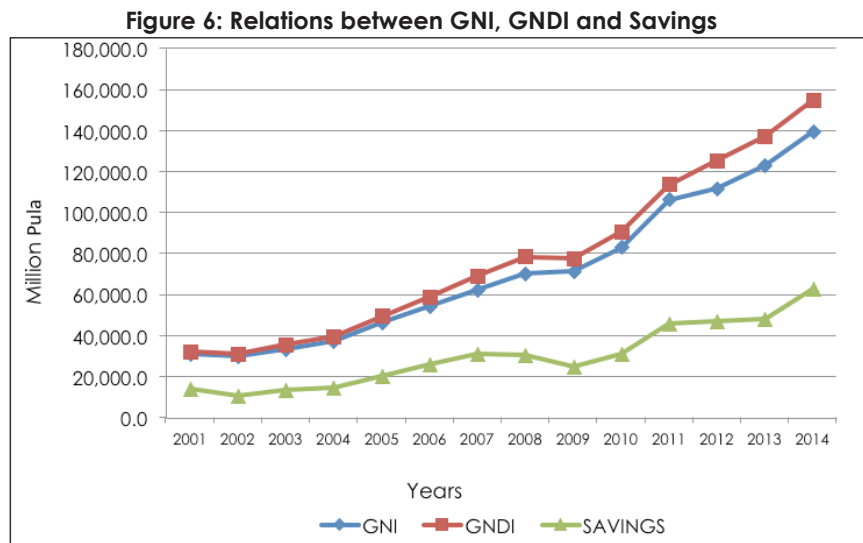

Gross National Disposable Income measures income available to the total economy for final consumption and gross saving. GNDI is derived as Gross National Income plus inflow of current transfers minus outflows of current transfers. Current transfer's inflows include SACU receipts.

GNDI increased by 13.0 percent to an amount of P155, 159.1 million in 2014.

2.7 Gross Savings

Gross Saving represents excess of current income over current expenditure. It is derived as Gross National Disposable Income minus final consumption expenditure which comprises of government consumption expenditure, household consumption expenditure and Non Profit Institutions Serving Households (NPISH).

In 2014 gross saving of the nation increased by 31.3 percent from P47, 930.9 million in 2013 to P62, 927.2 million.

2.8 Capital Stock

It is generally accepted that the level of gross fixed capital formation, and hence the growth in fixed capital stock, has a material influence on an economy's labour productivity, business competitiveness and ultimately the rate of increase in the standard of living. Estimates of capital formation and the stock of physical capital are therefore key indicators for assessing macro-economic performance.

An estimate of the capital stock refers to a value that is attached to the total physical capital in existence at a specific point in time in an economy. In addition, the estimates of the value of capital stock reflect the actual physical capacity available for repeated use in the production of other goods and services. In practice, it is usually calculated as gross or net capital stock in real terms and the "perpetual inventory method" (PIM) is one of the methods frequently used to produce estimates of the stock of tangible reproducible assets.

At current prices, capital stock was estimated at P268, 729.9 million in 2014 compared to P239, 010.8 registered in the previous year.

At constant prices, capital stock increased by 4.8 percent in the year under review from P150, 235.1 million recorded in the previous year to P157, 509.6 million.

3. Quarterly Gross Domestic Product

Table A4: Quarterly Key figures at constant 2006 prices

	Real Gross Domestic Product		Total Final Consumption		Gross Fixed Capital Formation	
	Percentage Change					
	Quarter-on Quarter	Year-on Year	Quarter-on Quarter	Year-on Year	Quarter-on Quarter	Year-on Year
First quarter 2013	2.8	8.9	-4	25.7	-10.9	-5.4
Second quarter 2013	1	11.4	-0.3	13.4	5.3	-0.1
Third quarter 2013	-0.4	11.7	2.4	8.5	-8.2	-14
Fourth quarter 2013	3.5	7.6	3.7	1.6	7.5	-7.3
First quarter 2014	-1.8	2.8	-3.6	2	17.5	22.2
Second quarter 2014	0.9	2	1.6	3.9	-4.7	10.5
Third quarter 2014	1.5	4	3.5	5	-6.6	12.4
Fourth quarter 2014	3.4	3.9	2.5	3.8	11.2	16.2

The estimated GDP at current prices for the fourth quarter of 2014 was P36 926.3 million compared to a revised level of P35 081.7 million registered in the third quarter of 2014.

The estimated GDP at constant 2006 prices for the fourth quarter of 2014 was P22 156.5 million compared to P21 422.1 million registered in the third quarter of 2014, amounting to an increase of 3.9 percent.

Real Gross Domestic Product (GDP) increased by 3.9 percent in the fourth quarter of 2014 compared to 11.7 percent accrued in the same quarter in 2013.

At industry level, most of the increase was attributed to Trade, Hotels & Restaurants, General Government and Transport & communications sectors which increased by 7.8, 7.5 and 7.1 percent respectively. Water & Electricity and Mining sector growth rates decreased by 31.3 and 0.2 percent respectively. The negative growth rate of 0.2 was attributed to a decline in diamond production by 3.4 percent in the fourth quarter of 2014 compared to 16.8 percent registered in the same quarter of 2013.

Trade, Hotels & Restaurants growth was attributed to the increase in real value added of Petrol stations and Retail Trade by 9.3 percent and 7.1 percent respectively.

The increase in the real value added of the General Government was mainly due to the increase in central government by 8.1 percent.

The increase in the real value added of Transport and Communications was mainly due to the increase in Post and Communications by 6.1 percent.

Figure 3: Real GDP growth rates (over four quarters)

Total final consumption expenditure recorded an increase of 2.5 percent in the fourth quarter of 2014, whereas in the same quarter of the previous year it increased by 3.7 percent. Fixed capital formation recorded an increase of 16.2 percent in the quarter under review compared to a decrease of 7.3 percent in the same period in 2013.

Real exports of goods and services went up by 16.2 percent in the fourth quarter of 2014 compared to an increase of 17.6 percent recorded in the same quarter of 2013, while imports of goods and services registered a decrease of 4.0 percent in the fourth quarter of 2014.

5. Methodology, Concepts and Definitions

5.1. Concepts and Definitions

The following are the main concepts and definitions used in the national accounts of Botswana. Every effort was made to follow these concepts as defined. It is worth noting that some modifications were at times necessary depending on the availability of data.

5.1.1 Gross Domestic Product (GDP)

This is total market value of all goods and services produced within a country, less the cost of goods and services used during the production process (i.e. Value Added of all resident producers). This is usually a particular period normally one year, but before deducting allowances for consumption of fixed capital (commonly known as depreciation).

It can also be measured by summing incomes accruing from production, which is compensation of employees, consumption of fixed capital, operating surplus and taxes on products less subsidies.

The GDP is measured in a third way by summing all the economy's final expenditure on goods and services. These are private final consumption, government final consumption, gross fixed capital formation, changes in stock and net exports of goods and services, i.e. exports less imports.

GDP is considered the most important of the national accounts' aggregates. There are no other concepts in the national accounts, which play such a significant role for the current appraisal of the country's economic situation. Mostly, the gross domestic product is expressed at market prices in the national accounts tables. However, sometimes the reader might come across the expression GDP at basic prices. This is GDP at market prices less net taxes on products.

5.1.2 Real Income

In the present SNA, the only general aggregate in real terms is the Gross Domestic Product (GDP). The GDP at constant prices provides an unambiguous product measure in real terms. Sometimes, this indicator does not give the "real effect" of a number of income flows, which have a significant impact on the economy. The most important of these is the terms-of-trade. Another important concept in the national accounts is the net factor income from the rest of the world, which enables the determination of the Gross National Product (Income). Without any international guidelines on the appropriate method to apply, practice differs to some extent from country to country depending on which aggregate the terms-of-trade (i.e. the ratio of exports to import price indices) is projected. In this report, international transaction such as exports, imports, and net factor income from abroad, have been deflated by the "import price deflator".

5.1.3 Gross Output

The gross output (gross value of production) of a production sector in the accounting period is the value of all goods and services produced and sold by the sector in that period, adjusted for changes in stock of finished goods and work in progress.

In the trade sector e.g. wholesalers and retailers, the gross value of production is calculated as equal to the gross trade margins (i.e. sale of goods purchased for resale minus cost of goods for resale).

The gross output of the General Government is set equal to the cost of the production including consumption of fixed capital. Cost of production entails labour compensation and other expenditures but not capital expenses.

In the case of financial institutions, gross output is equal to the sum of actual output and imputed service charge. The imputed service charge is equal to the difference between interest received and interest paid.

For insurance enterprises, the output of casualty insurance is equal to the difference between the premiums received and claims, while for life insurance it is the excess of premiums received over claims and net additions to actuarial reserves less interest paid on these reserves.

5.1.4 Intermediate Consumption

The intermediate consumption of industries is the value of raw materials and other goods and services used up in production process. This includes repairs and maintenance of capital stock and indirect expenditure on financing capital formation and transfer costs involved in purchases and sales of land, intangible assets and financial claims.

The raw materials, other goods and services etc. are commodities and are non-durable goods. The commodities should be valued at purchasers' values (i.e. at the cost of the items in the market to the point of delivery to consuming establishment at the moment the items enter into production of the unit). Such a principle of pricing ensures that charges for intermediate consumption will be equivalent to the cost of replacing the commodities at the time these items are actually consumed.

5.1.5 Value Added

The value added of a production sector (in an accounting period) is equal to the gross output minus intermediate consumption. The sum of all the production sectors' value added is defined as Gross Domestic Product (GDP).

5.1.6 Gross National Product (Income)

This is equal to GDP at market prices plus net compensation of employees from abroad and net entrepreneurial and property income from abroad.

5.1.8 Gross Fixed Capital Formation (GFCF)

Gross Fixed Capital formation of a production sector is the outlays or additions of new durable goods to the stocks of fixed assets less net sales of similar second-hand and scrapped goods.

5.1.9 Durable Goods

Durable goods are goods with an expected lifetime of one year or more.

5.1.10 Gross Capital Formation (GCF)

Gross Capital Formation is the sum of GFCF and changes in inventories.

4.1.11 Consumption of Fixed Capital (Depreciation)

Consumption of fixed capital is the reduction in value of fixed assets due to wear and tear, foreseen obsolescence and the normal rate of accident damage.

5.1.12 Compensation of employees

Compensation of employees consists of all payments in cash and in kind, by producers to employees. It includes:

- a) Wages and salaries in cash and in kind
- b) Employers' contributions to employees' social security schemes, pensions, life insurance and any other social contributions.

5.1.13 Operating Surplus

In the accounts, operating surplus is calculated as a residual, which is equal to gross output less the sum of intermediate consumption, compensation of employees, consumption of fixed capital and taxes on products less subsidies.

5.2 Methodology

5.2.1 Approaches Used

Value added is estimated through the production approach for almost all industries. This approach looks at the way output is produced. It measures the contribution to output made by each producer by deducting from total value of its output the values of goods and services it has purchased from other producers and used up in producing its output.

Value added also can be estimated through the income approach. This approach has been used to estimate some subgroups of private services and for producers of Government services. This approach considers the costs incurred, by producers within its operations like payments of employees, indirect taxes less subsidies received, consumption of fixed capital and the operating surplus.

GDP can also be estimated by the expenditure approach. This approach looks at the final use of the country's output for private consumption, government consumption, gross capital formation and net exports. In other words, it shows what becomes of output once it has been produced.

In principle, wherever possible the use of more than one approach is desirable, not only because of the analytical usefulness of the figures but also as a check on reasonableness of the estimates.

Government is defined as all units performing the usual functions of Government - that is, the implementation of public policy through the provision of primarily non-marketed services and the transfer of income, supported by compulsory levies on other services. Central Government covers all units that are instruments of a country's central authority, whose jurisdiction extends to all parts of the country. Government owned enterprises and establishments (Government industries) are excluded from Government on the production side and included in the respective industrial sectors. Local Government consists of governmental units, which exercise an independent function in the various towns, cities and district councils. The term General Government therefore includes the activities of both central and local government.

5.2.2 Valuation of Services by Banks and Other Financial Intermediaries

To obtain a fair valuation of the services performed by banks and other financial intermediaries, these institutions were deemed to have performed services and to have received income on their production account above service charges, ledger fees, etc. This extra income for banks is set equal to the difference between interest received and interest paid. For casualty insurance companies, it is the difference between the premiums received and the claims paid. As for life insurance, it is the excess of premiums over the sum of the claims paid and the net additions to the actuarial reserves.

5.2.3 Estimation of Consumption of Fixed Capital (CFC)

The national accounts' estimate of consumption of fixed capital is presently determined as a by-product of the perpetual inventory method (PIM) on a reducing balance technique. In this case consumption of fixed capital at constant prices is based on long time series for gross fixed capital formation at constant prices and estimates of average lifetime by kind of asset. Average lifetime expresses the number of years an asset is expected to be used for production purposes. The fixed capital consumption figures at constant prices are converted to current prices by using the price indices for the acquisition of fixed capital according to sector and kind of asset. Thus the consumption of fixed capital in the National Accounts might deviate considerably from the recorded depreciation in business accounts.

5.2.4 Estimation of Financial Intermediation Services Indirectly Measured (FISIM)

The method for calculating Financial Intermediation Services Indirectly Measured, widely known as FISIM, has been refined in the light of experience in implementing the 1993 SNA recommendations. By convention the 2008 SNA recommends that FISIM applies only to loans and deposits and only when those loans and deposits are provided by, or deposited with financial institutions.

The 2008 SNA recommends that the consumption of FISIM should be allocated between users (lenders as well as borrowers) treating the allocated amounts either as intermediate consumption by enterprises or as well as final consumption. The 1993 SNA calculated FISIM as the difference between property income receivable and interest payable. The property income receivable excluded that part which was receivable from investment of own funds. The 1993 SNA recognized that in practice it may be difficult to find any method of allocating FISIM among different users and, therefore, accepted that some countries may prefer to continue to use the convention whereby the whole of the services are allocated to intermediate consumption of the notional industry. This possibility has been removed in the 2008 SNA.

5.2.5 Property Incomes:

The terms governing these payments are usually specified in the financial instrument created when the funds are transferred from the creditor to the debtor or in the contract or lease signed when the right, say to exploit sub-soils is transferred from tenant or lessee. Such arrangements are made only for a limited time, after which the funds are repaid and the right revert to the owner. The period may be several months or several years and such arrangements can be renewable. In the present case, property incomes include interests, dividends, withdrawals, royalties, retained earnings and rent of land.

5.2.6 Capital stock and depreciation

It is generally accepted that the level of gross fixed capital formation, and hence the growth in fixed capital stock, has a material influence on an economy's labour productivity, business competitiveness and ultimately the rate of increase in the standard of living. Estimates of capital formation and the stock of physical capital are therefore key indicators for assessing macro-economic performance.

An estimate of the capital stock refers to a value that is attached to the total physical capital in existence at a specific point in time in an economy. In addition, the estimates of the value of capital stock reflect the actual physical capacity available for repeated use in the production of other goods and services. In practice, it is usually calculated as gross or net capital stock in real terms and the "perpetual inventory method" (PIM) is one of the methods frequently used to produce estimates of the stock of tangible reproducible assets.

According to the guidelines of the 2008 System of National Accounts (2008 SNA), the capital account records the values of non-financial assets and distinguishes between the following five classifications:

- Gross fixed capital formation;
- Consumption of fixed capital;
- Changes in inventories;
- Acquisitions less disposals of valuables; and
- Acquisitions less disposals of non-produced, non-financial assets (e.g. mineral deposits).

Gross fixed capital formation, comprises the value of acquisitions less disposals of new or existing fixed assets. Fixed assets consist of tangible and intangible sets produced as outputs from production processes and used repeatedly or continuously in other production processes over a period of more than one year.

However, in the calculation of the fixed capital stock for the Botswana economy a narrow definition of fixed assets is used, mainly due to the fact that time series for gross fixed capital formation data are not available by type of economic activity and/or by type of asset, except for the economy as a whole. The stock of capital is defined as consisting of durable and reproducible tangible assets. It excludes tangible assets such as land and sub-soil mineral deposits as these

kinds of assets are not producible. Other kinds of "fixed assets", such as computer software, are also excluded because they are intangible. In addition, the transactions in existing assets between sectors are not taken into account in the current national accounts estimates of gross capital formation and the calculation of fixed capital stock. The value of transactions in existing assets is relatively small in relation to total gross domestic fixed investment and should therefore not affect the reliability and usefulness of the estimates of the capital stock unduly.

The practical application of the PIM implies that the first step is to convert gross fixed capital formation at current prices to constant prices using the most appropriate asset price indices available. The entire PIM is applied using constant price data to obtain consumption of fixed capital formation and the net and gross stocks in constant prices. However, in the final phase of the PIM model price indices are again applied to inflate the estimates to current prices.

As already indicated, the PIM is normally used in the calculation of fixed capital stock. The traditional PIM used for estimating the gross capital stock consists of an accumulation of past flows of gross fixed capital expenditure, after the deduction of the estimated value of retirements from the stock, but before taking the deduction of any allowances for the consumption of fixed capital into account. Estimates of net capital stock are obtained indirectly by applying a capital consumption function based on the expected economic lives of the various assets. Consumption of fixed capital may be defined as that part of the gross domestic product which is required to replace fixed capital used up in the production process during an accounting period. It is based on the concept of the expected economic lifetime of an asset and is designed to cover the loss in value due to normal wear and tear, expected obsolescence, and the normal amount of irreparable accidental damage. Unforeseen obsolescence is treated as a capital loss rather than as consumption of fixed capital.

Another important requirement for the implementation of the PIM is a set of service lives for the narrowly-defined asset groups that are used in different sectors and kinds of economic activity. The mean asset lives are the most important of the assumptions used in the PIM together with asset life distributions, they determine when assets are retired from the gross capital stock, the rate of depreciation charged and hence the net stock. In addition, this set of service lives should be updated regularly to reflect any structural or cyclical changes in the lengths of time that assets remain in the stock. In practice, however, the statistical resources and information actually available falls short of this ideal. Experience also shows that service life estimates are generally available only for broad asset categories, there is limited information available on differences in lives of asset groups between sectors and kind of activity and service lives are updated at rare intervals in most countries.

In the case of the Botswana economy and for the purpose of this exercise, the average economic life times that were previously used in the calculation of capital stock data for Botswana i.e. 20 years for residential buildings, 30 years for non-residential buildings, 15 years for construction works, 10 years for machinery and equipment and 7 years for transport equipment were retained and used in the PIM calculations. In general, this implies fairly long time series for gross fixed capital formation of the respective asset types to effectively implement the capital stock calculations.

Price indexes are used to convert all expenditure and costs of capital goods that occur in different periods to a similar monetary unit so that they can be aggregated and to ascertain a time independent level of real purchasing power forgone. In the PIM, this is achieved by deflating current price gross and net capital stock at the beginning of the period, and current period GFCF to constant prices before determining retirements and depreciation.

Estimates of capital stock and consumption of fixed capital at current replacement value are obtained by reflatting the constant price estimates to current price values. The price indices used to reflate the constant price estimates are the same as those initially employed to deflate GFCF. A refinement for future development on the price indices used in the exercise presented could be an adjustment to an end year price index basis by averaging the price indices for year t and year $t+1$. Subsequently, the resulting series at current and constant prices are aggregated to a level appropriate for the national accounts of Botswana.

The following outlay reflects the structure and provides an example of the calculations used in the compilation of capital stock and depreciation data for the national accounts of Botswana:

Capital stock

1.1 Initial value

$$KV_n = \sum_{1=n}^t \left(I_t \times \frac{t-1}{n} \right)$$

KV	=	Capital stock
n	=	Depreciation period
I	=	Gross fixed capital formation
t	=	Period

1.2 Rest of the series

KV _t	=	KV _{t-1} + NI
NI	=	Net investment

Depreciation

$$WV_t = \left(\sum_n [I_n] \right) \times \frac{1}{n}$$

WV	=	Depreciation
n	=	Depreciation period
I	=	Gross fixed capital formation
t	=	Period

Along with several data limitation issues facing the national accounts of Botswana to compile capital stock data as already mentioned, one of the main technical hitches was the lack of appropriate price indices to deflate gross fixed capital formation of the respective type of assets used in the model. The only reliable price index compiled by Statistics Botswana, namely, the consumer price index would not be appropriate for the deflation of gross fixed investment in residential buildings, non-residential buildings, construction work, transport equipment, and machinery and equipment. Consequently, the price indices of the South African economy for the respective asset types were used. These indices were obtained from data published in the Quarterly Bulletin of the South African Reserve Bank for gross fixed capital formation by type of asset at current and constant prices. In addition, the framework provides detail of the time series for the five types of assets at current and constant prices, derived deflators for the respective asset classes and the conversion of the indices from the 2005 base year which is the current base period used in South Africa to the 2006 base year as applicable for Botswana.

5.2.7 Constant price figures

The accounts in this report are at 2006 price. The “double deflation” method is adopted, so that for each sector we compute one deflator for production and another for the intermediate consumption separately, and derive the value added at constant prices as the difference between the two. Deflation of intermediate consumption has been done at the commodity level. The breakdown of each commodity is determined from the results of the Economic survey. Consumer price indices are used to derive constant estimates. Appropriate price indices from South Africa were also used to deflate capital formation.

The technique of double deflation is used because for several sectors of the economy, the trend in output prices has developed quite differently from that of input prices. Reasons for adopting the method are firstly, because some of the sectors produce commodities whose prices are determined in the world market and therefore have no bearing on costs in Botswana. Again, for sectors that are not export oriented one finds that they produce only one commodity that does not depend on input price movements.

The different categories of end use, including household final consumption expenditure, are deflated separately. The constant price estimate is obtained by deflating current figure by the national cost-of-living index. The procedure results in a discrepancy between GDP as the sum of each sector's value added at constant prices, and that obtained by summing all final uses less net imports. The first method (Production Approach) give the GDP at constant prices and the GDP by expenditure is adjusted by this discrepancy called errors and omissions in the tables.

6. Statistical sources

6.1 Data sources

The following are some of the statistical sources used to compile the National Accounts Statistics of Botswana:

- Annual Economic Survey
- Administrative data
- Agriculture Statistics
- Government Accounts (Central and local)
- External Trade Statistics
- Balance of Payments Statistics
- Household Income and Expenditure Survey
- Price Statistics
- Employment Statistics
- Transport Statistics.
- Mine Statistics.
- Population Projections

6.2 Sources of price data

Statistics Botswana collects price data for the cost-of-living index and it is used to deflate most of the industries in National accounts. Consumer Price Index measures the change overtime in the cost of a fixed basket of commodities and services.

However, some price indices are taken from South Africa price statistics. This is justified on the assumption that most prices in Botswana change approximately in the same pattern as in Republic of South Africa (RSA). The consumer price index would not be appropriate for the deflation of gross fixed Capital Formation. The price indices of the South African economy for the respective asset types were used.

7. Reliability of data

The main information utilized in the national accounts of Botswana is obtained through the Annual Economic Survey (AES). The results give the production accounts, income and outlay accounts, and capital finance accounts for commercial establishments and/or enterprises in Botswana. The AES is organized with internal validation checks so that the person editing the completed questionnaire is able to check the data for consistency.

The AES does not cover informal activities (e.g. traditional agriculture is derived from different sources). However, some results from the AES are used to estimate the production of traditional agriculture. The yearly Agricultural Statistics surveys provide valuable information on crops and livestock. Crops are valued according to prices reported by Botswana Agricultural Marketing Board (BAMB) whilst livestock is valued according to prices reported by Botswana Meat Commission (BMC).

Rent for Owner-Occupied dwellings is imputed based on Population changes and the price movements.

The monthly/annual financial returns/statements from the Accountant General have been used to provide reliable information on Central Government transactions. The district and town council accounts were used to provide data on Local Governments' transacted estimates, for national accounts' purposes.

The marketed part of the household final consumption is the weakest major component in the national accounts of Botswana. It is directly determined from Household Income and Expenditure Survey (HIES) and extrapolated in the years where there is no HIES. The HIES results are checked against the end use of imports, to decide whether it was reliable. This is done on the assumption that a major part of this consumption is imported.

Appendix 1: International Standard Industrial Classification (Botswana ISIC Adaptation – Revision 3)

A: Agriculture, Hunting and Forestry

- 0100 Traditional or Subsistence agriculture
- 0110 Commercial crop farming
- 0121 Commercial livestock farming
- 0122 Commercial poultry farming
- 0123 Commercial wild game farming e.g. ostrich
- 0124 Other commercial livestock farming e.g. bees
- 0130 Commercial mixed farming
- 0140 Agricultural & Husbandry Services, e.g. Artificial Insemination, Irrigation
- 0150 Hunting and trapping
- 0200 Forestry (All)

B: Fishing

- 0500 Fishing (All)

C: Mining and Quarrying

- 1010 Coal Mining
- 1320 Copper/Nickel mining
- 1423 Diamond mining
- 1424 Soda ash and salt mining
- 1425 Gold Mining
- 1426 Quarrying and other mining

D: Manufacturing (includes repair of machinery & equipment)

- 1510 Meat and meat products
- 1520 Dairy products
- 1530 Grain mill Products includes maize, sorghum, millet etc. human & animal Feeds
- 1541 Bakery products
- 1545 Other food products not elsewhere classified (e.g. Chocolates, Sweets)
- 1550 Beverages (Beer including Traditional Beer, Soft Drinks, etc.)
- 1600 Tobacco Products - Cigarettes, etc.
- 1700 Textiles (exc. Clothing) includes preparation of textile fibres, natural or Synthetic material
- 1800 Clothing and other wearing apparel (inc. Leather)
- 1910 Tanning and leather products (excluding Clothing/Footwear) e.g. Handbag, Souvenirs, etc
- 1920 Footwear
- 2000 Wood and Wood Products excluding furniture but including building Materials and straw products (mats, baskets etc)

2100	Paper and Paper Products, e.g. Newsprint, tissues
2200	Printing and Publishing (including periodicals, journals etc.
2400	Chemical and Chemical Products (including Soap, Paint, Fertilizers and Pesticides etc
2500	Rubber and Plastic Products (including Tyres, Retreading)
2610	Cement Manufacturing
2620	Non-Metallic mineral products excluding cement but including glass ceramic and cement products e.g. bricks, tiles, pots.
2700	Basic metals, e.g. Iron Foundaries
2800	Fabricated metal products exc. machinery and equipment
2900	Machinery and equipment including refrigerators and other domestic equipment
3000	Office, accounting & computing machinery, e.g. Photocopying Machines
3100	Electrical machinery and apparatus e.g. Lightning Arresters, Voltage Limits
3200	Radio television and communication equip and apparatus
3300	Medical, precision, optical instruments, watches, clocks
3400	Motor vehicles, trailers and semi-trailers
3500	Other transport equipment, e.g. Ships & Boats, Railway Locomotives
3610	Furniture (all types including of wood, also mattresses)
3691	Manufacture of Jewellery
3692	Manufacturing of other products not elsewhere classified Pens, Pencils
3700	Recycling, Processing of Metal & Non Metal Waste

E: Electricity, Gas and Water Supply

4010	Electricity generation and supply (Not household/building electricians)
4020	Gas manufacture and distribution
4030	Steam/hot water supply
4100	Collection, purification, distillation of water (including village supply for sale
4200	Borehole Syndicates

F: Construction

4510	Site preparation, e.g. demolition and clearing of sites
4521	Construction of Buildings and Houses - complete including repair
4522	Construction/Civil Engineering - Roads, Dams, Water Projects
4530	Building installation work - Plumbing, Electrical, Air-Conditioners
4540	Building completion work - Painting, Tiles, Carpets including repair of these
4550	Renting of construction or demolition equipment including crane hire

G: Wholesale & Retail Trade (includes repair of Motor Vehicles & Personal

	Household Goods)
5010	Sale of motor vehicles
5020	Maintenance and repair of motor vehicles
5030	Sale of motor vehicle parts and accessories
5040	Sale, maintenance and repair of motorcycles
5050	Sale of automotive fuel/Petroleum products (filling stations)
5100	Wholesale and commission trade (excluding. cattle dealers)
5151	Cattle Dealers
5210	Non-specialized retail trade e.g. General Department. Stores
5221	Retail stores specializing in food, beverages and tobacco excluding bottle
Stores	

- 5222 Bottle Stores
- 5230 Retail stores specializing in goods except food, beverages and tobacco
- 5252 Retail trade through informal outlets: stalls, markets, hawkers, etc.
- 5260 Repair of personal and household goods e.g. Televisions, Videos, Watches.

H: Hotels and Restaurants

- 5510 Hotels and other short stay accommodation e.g. hostels, camp sites
- 5521 Restaurants, cafes and canteens
- 5522 Bars/Bottle Stores (& Shebeens) - mostly consumed on the premises

I: Transport, Storage & Communications

- 6010 Rail transport
- 6023 Freight transport by road
- 6024 Passengers road transport. e.g. Buses and Taxi/ Combi Companies
- 6025 Taxis/Combis - Sole or small operators only
- 6030 Transport by pipeline
- 6100 Water transport
- 6200 Air transport
- 6304 Travel agents, tour operators, safari operators
- 6305 Cargo handling, storage, warehousing
- 6309 Other transport not elsewhere classified, e.g. Hand carts, Donkeys
- 6411 Postal services
- 6412 Courier activities, e.g. DHL, TNT
- 6420 Telecommunications

J: Financial Intermediaries

- 6510 Banking
- 6590 Financial leasing and credit granting (ex banking/insurance)
- 6600 Insurance & pension funds
- 6700 Other financial activities (e.g. stock brokering)

K: Real Estate, Renting and Business Activities

- 7000 Real estate
- 7110 Transport Rental e.g. Hire Car Rental
- 7120 Other Rental exc. Person and Household Goods, e.g. Machinery
- 7130 Rental of Household and Personal Goods e.g. Video Tapes
- 7200 Computing and related activities including data entry/processing & software consultancy organizations
- 7300 Research and Development
- 7410 Legal, accounting, bookkeeping, auditing: business/management consultancy
- 7421 Geological exploration and Prospecting
- 7422 Architectural, engineering and other technical activities e.g. surveying
- 7430 Advertising
- 7480 Security Organizations
- 7490 Business activities not elsewhere classified

L: Public Administration

- 7540 Central Government Administration
- 7550 Local Government Administration

M: Education

- 8010 Primary education (including pre-primary)
- 8021 Secondary education
- 8022 Technical & Vocational Education
- 8030 Higher education

8090 Adult and other education

N: Health and Social Work

8510 Human health activities (Hospitals, etc.)

8520 Veterinary activities

8530 Social work activities (including Children's day care centre)

O: Other Community, social and Personal Service Activities

9000 Sewage and refuse disposal, sanitation etc. excluding pest control

9110 Business, employer and professional organization

9120 Trade Unions

9191 Religious organizations

9192 Political Organizations

9198 Burial Societies

9199 Other membership organizations

9210 Motion picture, radio, television, other entertainment

9220 News agency activities

9231 Libraries and Archives

9232 Museums and other cultural organizations

9240 Sporting and other recreational activities

9300 these services activities (including dry cleaning, hairdressing, personal services, informal car washing, funerals)

P: Private Households with Employed Persons (for Household Surveys only)

9500 Private households with employed persons (Maids, Gardeners, and Security)

Q: Foreign Missions, International Organizations

Foreign missions: International organizations
